

AI-POWERED RURAL MENTAL HEALTH

MindReach AI

Early support, clear guidance, and care that reaches everyone.

THE ACCESS GAP

Mental healthcare should not depend on where you live

- Rural communities face limited access to mental-health professionals and support services.
- People may not know when or where to seek help.
- Stigma, low awareness, connectivity, digital literacy, and transport barriers delay support.

THE FIRST STEP

MindReach AI helps people take the first step

- Private check-ins, AI-assisted non-diagnostic triage, wellbeing guidance, safety-first escalation, trusted contacts, resource discovery, and wellness history.
- The prototype is designed as a lightweight, mobile-first experience for rural and underserved communities.
- **Assist the path to care, never replace mental-health professionals.**

THE CARE PATH

From feeling to support

01

User check-in

02

Wellbeing assessment

03

Triage engine

04

AI-assisted explanation

05

Support recommendation

06

Human or emergency support

Urgent safety indicators override ordinary scoring.

ONE PLATFORM · MANY LAYERS

One platform, multiple layers of support

Mental-health check-in

Mood, stress, and sleep.

AI assistance

Safe, non-diagnostic language.

Support levels

LOW · MODERATE · HIGH · URGENT

Safety and continuity

Escalation, trusted contacts, resources, wellness history, and rural mode.

Responsible AI-assisted triage

01

User responses

02

Validation and feature extraction

03

Transparent triage rules

04

Risk level

05

AI explanation

06

Recommended next step

What AI supports

AI supports summarization, explanation, general wellbeing guidance, and support recommendations.

What it does not do

MindReach AI does not diagnose mental-health disorders.

Full-stack architecture

TRUST BY DESIGN

The technology stack is built for trust

Frontend

React · JavaScript · Vite · Tailwind or CSS ·
Recharts · Lucide

Backend and data

Node.js · Express.js · REST · PostgreSQL ·
Prisma

AI

AI API plus a rule-based safety layer

Security

JWT · bcrypt · Helmet · CORS · rate limiting ·
input validation

Deployment

Vercel · Render or Railway · managed PostgreSQL

USER JOURNEY

A simple journey for a complex problem

1. Visit MindReach AI
2. Select a language
3. Complete the seven-question wellbeing assessment about mood, stress, and sleep over the past two weeks.
4. Receive a support level and AI explanation
5. Choose the next action
6. Connect with trusted or professional support

RURAL-FIRST BY DEFAULT

Designed for rural and underserved communities

- Low-data, mobile-first experience with offline-friendly access to important resources.
- Multilingual support and simple language.
- Local wellness history and pattern tracking without requiring an account or external data transmission in the prototype.
- Human-centered design keeps technology in service of care.
